1. Flowchart

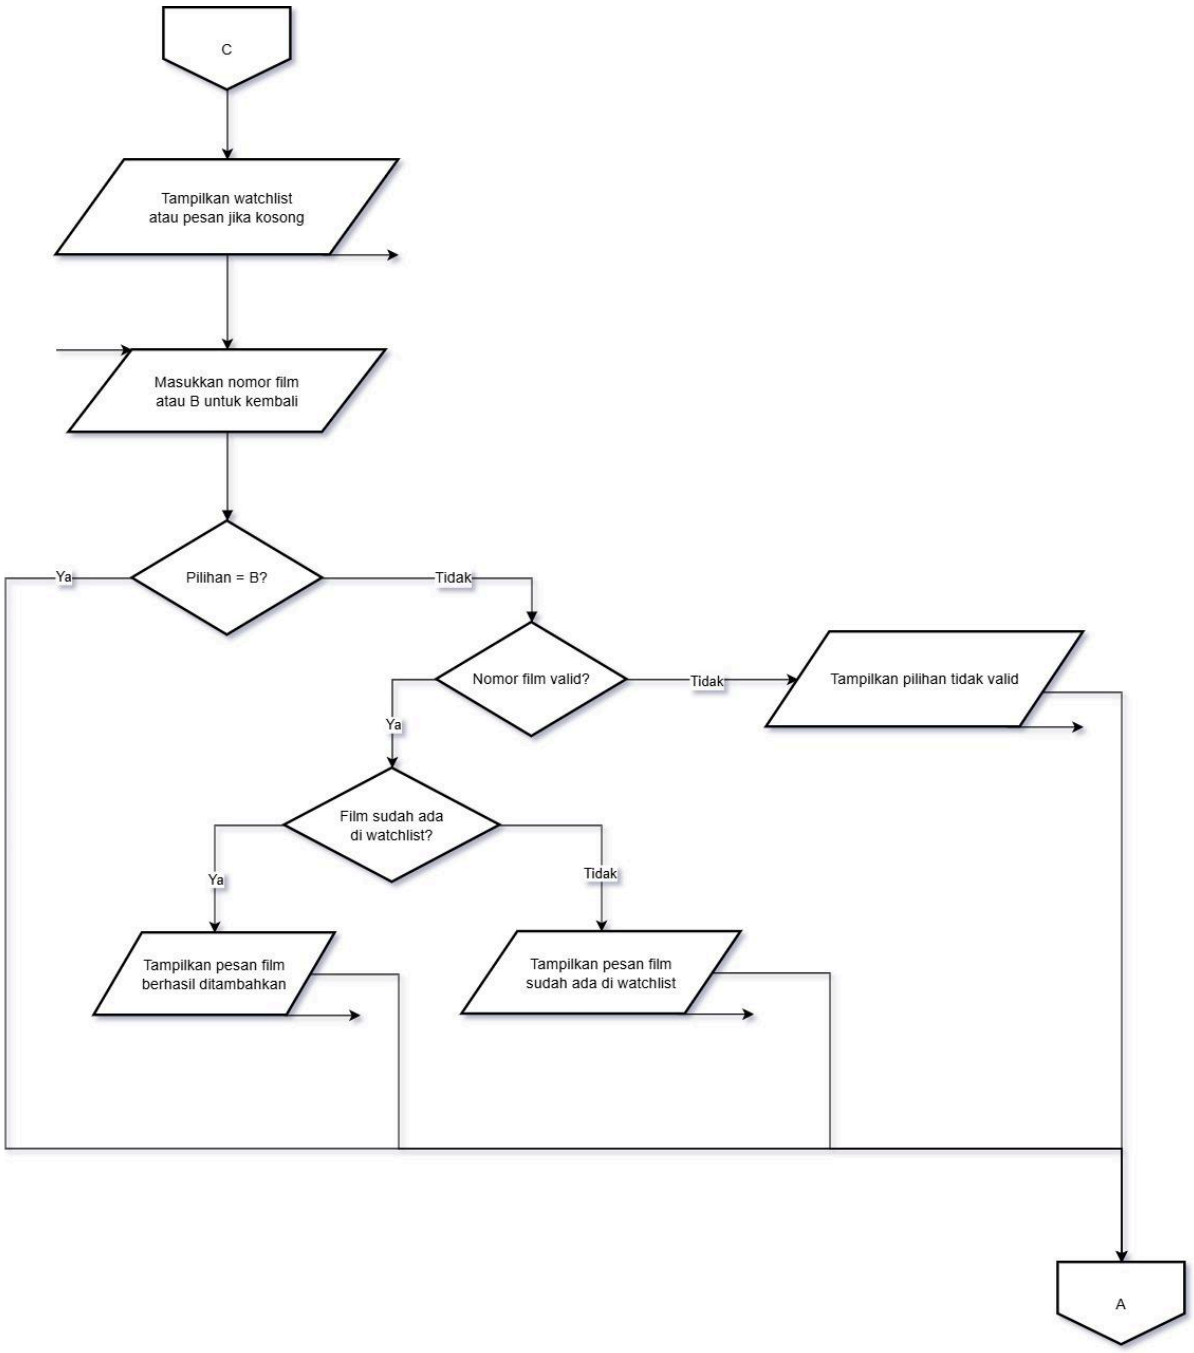

Gambar 1.1

A
Tampilkan menu utama
Masukkan pilihan menu
Pilihan menu?
Ya
Tidak
1. Daftar film
2 . Watchlist
0. Keluar
Tampilkan pilihan tidak valid
B
C
Pengguna admin?
End
3. Tambah film
4. Edit data film
D
E

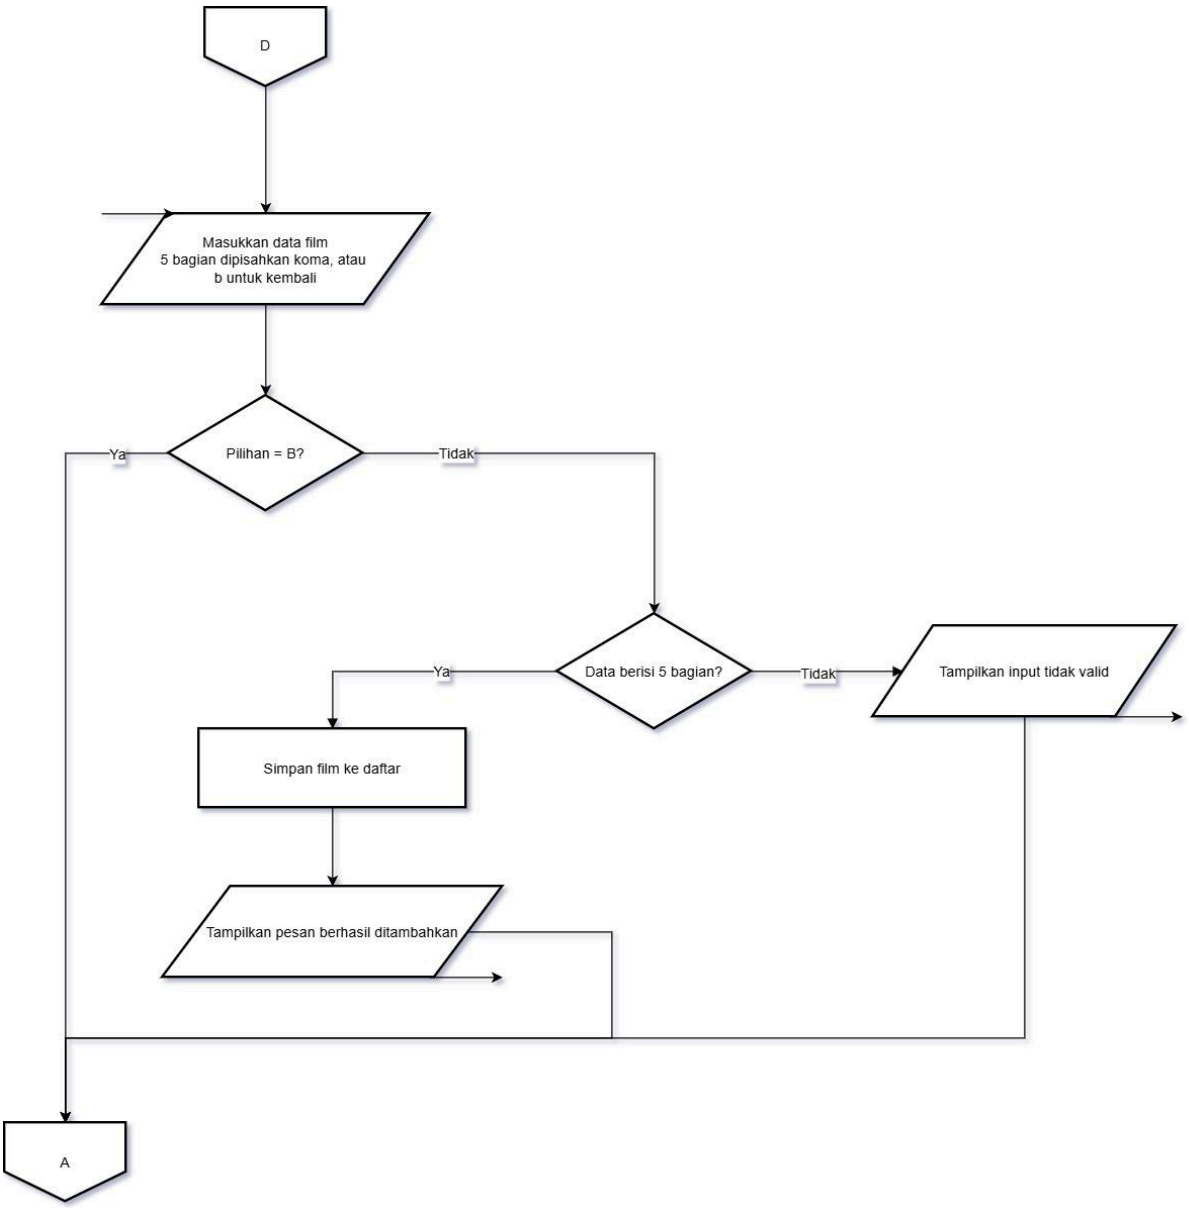

Gambar 2.1

B
Tampilkan daftar film
Masukkan nomor film untuk
detail data atau B untuk kembali
Pilihan = B?
Ya
Tidak
Nomor film valid?
A
Tampilkan detail film
(judul, tahun, sutradara, durasi, rating)
Tampilkan pilihan tidak valid

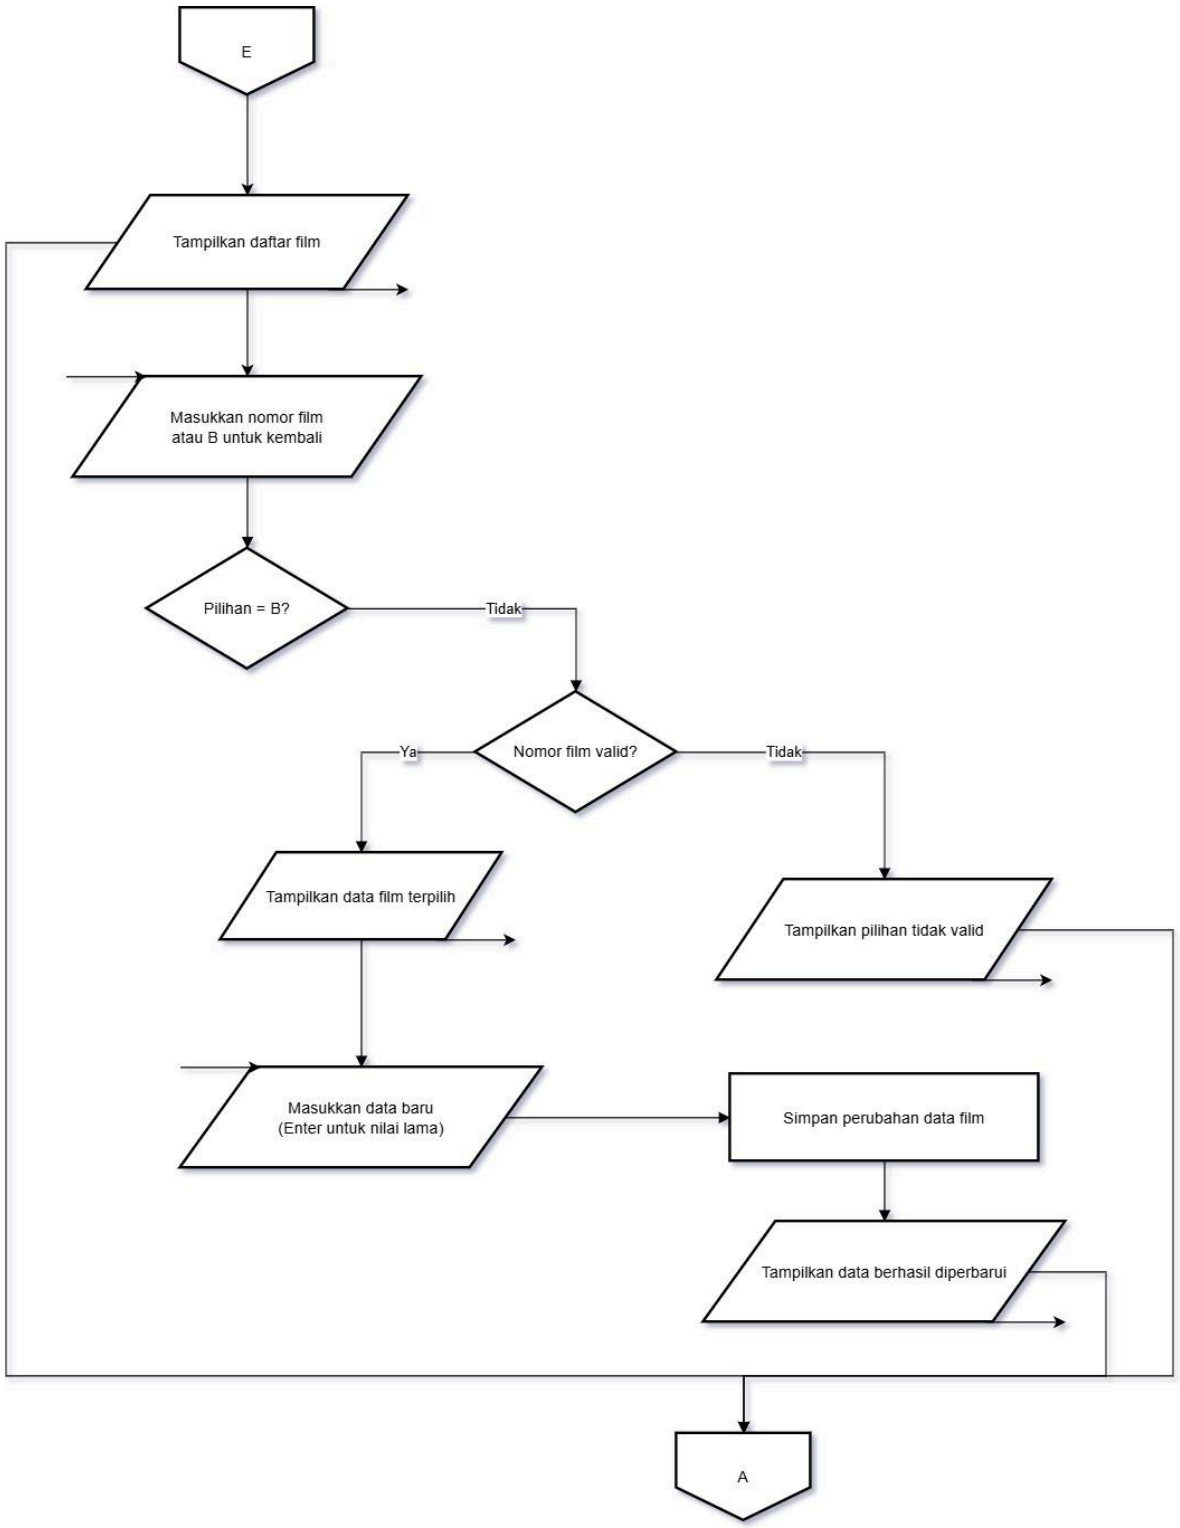

Gambar 3.1

C
Tampilkan watchlist
atau pesan jika kosong
Masukkan nomor film
atau B untuk kembali
Pilihan = B?
Ya
Tidak
Nomor film valid?
Tidak
Tampilkan pilihan tidak valid
Ya
Film sudah ada
di watchlist?
Ya
Tidak
Tampilkan pesan film
berhasil ditambahkan
Tampilkan pesan film
sudah ada di watchlist
A

Gambar 4.1

D
Masukkan data film
5 bagian dipisahkan koma, atau
b untuk kembali
Pilihan = B?
Ya
Tidak
Data berisi 5 bagian?
Ya
Tidak
Tampilkan input tidak valid
Simpan film ke daftar
Tampilkan pesan berhasil ditambahkan
A

Gambar 5.1

E
Tampilkan daftar film
Masukkan nomor film
atau B untuk kembali
Pilihan = B?
Tidak
Nomor film valid?
Ya
Tidak
Tampilkan data film terpilih
Tampilkan pilihan tidak valid
Masukkan data baru
(Enter untuk nilai lama)
Simpan perubahan data film
Tampilkan data berhasil diperbarui
A

Gambar 6.1

2. Deskripsi Singkat Program

Sistem Manajemen Film ini berbasis Python yang dirancang untuk mengelola pustaka film dan daftar tontonan pengguna melalui Command-Line Interface (CLI). Program ini dilengkapi dengan mekanisme autentikasi dan pembatasan hak akses berbasis peran, sehingga membedakan alur kerja antara pengguna biasa dan admin.

3. Source Code

```
if choice == "1":
    if username := input("Enter username: "):
        password = input("Enter password: ")

        login_success = False
        for user in users:
            if username == user[0] and password == user[1]:
                print(f"\nwelcome {user[2]} {user[0]}!\n")
                login_success = True
                break

        if login_success:
            break
        else:
            print("invalid username or password! Try again?\n")

elif choice == "2":

            print("successfully added!")
        else:
            print("invalid input!")
```

```
elif choices == "3" and valid_admin:
    if not added_films:
        print("you haven't added film yet")
    else:
        print("--- Added Films ---")
        for title in added_films:
            print(f"{title}")

    input_film = input("add your films include the data here\n"
        "for example: (title film), (years release), (director), (film
duration), (rating)\n"
            "(b to cancel):")

    if input_film.lower() in cancel:
        continue
    else:
        film_data = [item.strip() for item in input_film.split(",")]
        if len(film_data) == 5:
            added_films.append(film_data[0])
```

A. Fitur Registrasi & Login Akun [Create & Read]

Membuat akun baru sebagai pengguna biasa (Create) dan memverifikasi kredensial username/password saat login (Read).

```
if choice == "1":
    if username := input("Enter username: "):
        password = input("Enter password: ")

        login_success = False
        for user in users:
            if username == user[0] and password == user[1]:
                print(f"\nwelcome {user[2]} {user[0]}!\n")
                login_success = True
                break

        if login_success:
            break
        else:
            print("invalid username or password! Try again?\n")

elif choice == "2":
    new_username = input("Enter new username: ")
    new_password = input("Enter new password: ")

    registered_usernames = [u[0] for u in users]
    if new_username in registered_usernames:
        print("Username already exists! Try again.\n")
    else:
        users.append([new_username, new_password, "user"])
        print("Registration successful! Please login.\n")
```

B. Fitur Katalog & Detail Informasi Film [Read]

Menampilkan daftar seluruh film yang tersedia dan menyajikan rincian informasi film secara terpisah (**Read**).

```
if choices == "1":
    while True:
        for i, film in enumerate(list_films):
            print(f"{i + 1}. {film[0]}")

        input_index = input("choose to see more detail(b to cancel): ")

        valid_index = [str(i+1) for i in range(len(list_films))]

        if input_index in cancel:
            break
        elif input_index in valid_index:
            data = int(input_index)-1
            print(f"\n--- {list_films[data][0]} ---")
            print(f"release: {list_films[data][1]}")
            print(f"directed by: {list_films[data][2]}")
            print(f"duration: {list_films[data][3]}")
            print(f"ratings: {list_films[data][4]}\n")
        else:
            print("invalid input.")
```

C. Fitur Manajemen Watchlist Pribadi [Create & Read]

Membaca isi daftar tontonan pengguna (**Read**) serta menambahkan judul film terpilih ke dalam watchlist tersebut (**Create**).

```
elif choices == "2":
    if len(watchlist_user) == 0:
        print("your watchlist is empty!")
    else:
        print("--- Your Watchlist ---")
        for i, film in enumerate(watchlist_user):
            print(f"{i+1}. {film}")

    input_index = input("add film index here(b to cancel): ")

    valid_index = [str(i+1) for i in range(len(list_films))]

    if input_index.lower() == 'b':
        continue
    elif input_index in valid_index:
        index = int(input_index) - 1
        title_film = list_films[index][0]

        if title_film not in watchlist_user:
            watchlist_user.append(title_film)
            print(f"{title_film} successfully added to your watchlist!")
        else:
```

```
            print(f"{title_film} is already in your watchlist!")
    else:
        print("invalid input.")
```

D. Fitur Penambahan Data Film - Khusus Admin [Create]

Menerima input 5 komponen data film baru dari admin dan menyimpannya ke dalam list film utama (**Create**).

```
elif choices == "3" and valid_admin:
    if not added_films:
        print("you haven't added film yet")
    else:
        print("--- Added Films ---")
        for title in added_films:
            print(f"{title}")

    input_film = input("add your films include the data here\n"
        "for example: (title film), (years release), (director), (film
duration), (rating)\n"
            "(b to cancel):")

    if input_film.lower() in cancel:
        continue
    else:
        film_data = [item.strip() for item in input_film.split(",")]
        if len(film_data) == 5:
            added_films.append(film_data[0])
            list_films.append(film_data)
            print("successfully added!")
        else:
            print("invalid input!")
```

E. Fitur Pembaruan Data Film - Khusus Admin [Update]

Memperbarui elemen data film yang berada di katalog utama sesuai indeks yang dipilih (**Update**).

```
elif choices == "4" and valid_admin:
    for i, film in enumerate(list_films):
        print(f"{i + 1}. {film[0]}")

    input_index = input("pick a films to change the data(b to back): ")

    if input_index.lower() in cancel:
        continue
    elif input_index.isdigit() and 1 <= int(input_index) <= len(list_films):
        data = int(input_index) - 1
```

```
        print(f"--- {list_films[data][0]} ---")
        print(f"release: {list_films[data][1]}")
        print(f"directed by: {list_films[data][2]}")
        print(f"duration: {list_films[data][3]}")
        print(f"ratings: {list_films[data][4]}")
        print("--------------------")

        print("Masukkan data baru (tekan Enter untuk menyimpan nilai lama):")
        title = input(f"title [{list_films[data][0]}]: ") or list_films[data][0]
        release = input(f"release [{list_films[data][1]}]: ") or
list_films[data][1]
        directed = input(f"directed by [{list_films[data][2]}]: ") or
list_films[data][2]
        duration = input(f"duration [{list_films[data][3]}]: ") or
list_films[data][3]
        ratings = input(f"ratings [{list_films[data][4]}]: ") or
list_films[data][4]

        list_films[data] = [title, release, directed, duration, ratings]
        print("Data successfully updated!")
    else:
        print("invalid input.")
```

5. Langkah-langkah Git

5. 1 Git Add

```
PS C:\praktikum_apd_2026> git add .
```

Perintah git add . digunakan untuk menandai file program baru yang ada di dalam folder posttest-apd-5 agar siap disimpan oleh Git.

5.2 Git Commit

```
PS C:\praktikum_apd_2026> git commit -m "pdf nya nyusul"
[main aeede17] pdf nya nyusul
 2 files changed, 302 insertions(+), 13 deletions(-)
 create mode 100644 posttest/posttest-apd-5/2609106088-ADINDAOLIVIAMAHARANI-PT-5.py
```

Perintah git commit -m “pdf nya nyusul” digunakan untuk menyimpan file program 2609106088-ADINDAOLIVIAMAHARANI-PT-5 ke dalam riwayat Git yang sudah ada lengkap beserta catatan perubahannya.

5.3 Git Push

```
PS C:\praktikum_apd_2026> git push
Enumerating objects: 11, done.
Counting objects: 100% (11/11), done.
Delta compression using up to 4 threads
Compressing objects: 100% (7/7), done.
Writing objects: 100% (7/7), 3.75 KiB | 226.00 KiB/s, done.
Total 7 (delta 2), reused 0 (delta 0), pack-reused 0 (from 0)
remote: Resolving deltas: 100% (2/2), completed with 2 local objects.
To https://github.com/adindaoliviaa2-spec/praktikum_apd_2026.git
   42a753c..aeede17  main -> main
```

Perintah git push digunakan untuk mengupload file program yang sudah disimpan tadi sebelumnya dari laptop ke tempat penyimpanan online di GitHub.
